

Intelligent Agents for Coalition Search & Rescue

te, J.Dalton, C.Siebra & S.Aitken AIAI, Edinburgh
adshaw & A.Uszok IHMC, Pensacola, Florida

The Coalition Search and Rescue Task Support (CoSAR-TS) demonstration showcases intelligent agents and AI planning systems working over a computational grid in which different policies govern who can do what. The agents use semantic web services to dynamically discover medical information and to find local rescue resources.
