

Dynamic Planning & Execution

Presented to KSCO 2007

1st May 2007, Waltham, MA

Major Andy Aitken, Dstl

Todd Humiston, AFRL

Jitu Patel, Dstl

Outline

- **Background**
- **A Military Perspective of DP&E**
- **Conceptual Model**
- **Example Application Domains**
- **Issues & Challenges**
- **Conclusions**

Background

- **Summation of TTCP AG1 work**

The Technical Cooperation Program

- **Formed in 1957**
- **Aim – to foster cooperation in the science and technology needed for conventional national defence**
- **Purpose – to enhance national defence at reduced cost**
- **TTCP Nations – AUS, CAN, NZ, UK, US**
- **Action Group 1 formed in 2003**

Action Group 1

Background (2)

- Summation of TTCP AG1 work
- **Contemporary Operating Environment**
 - Disorder, Complexity & Uncertainty
- **Constantly changing situation**
- **Agility required**
- **Planning & Execution processes**

A Military Perspective of DP&E

- **Short Study – UK operational community**
- **No official definition**

AG1 Definition of DP&E

“The capability to continuously develop, analyse, select and flexibly execute a robust course of action based on a commander’s evolving intent, situational awareness and capabilities.”

A Military Perspective of DP&E (2)

- Short Study – UK operational community
- No official definition
- **Concepts & Doctrine**
- **Recent Operational Experience**
 - **Dynamic Environment – planning time reduced**
 - **Planning process needs adaptation**
 - **Require capability to plan quickly**

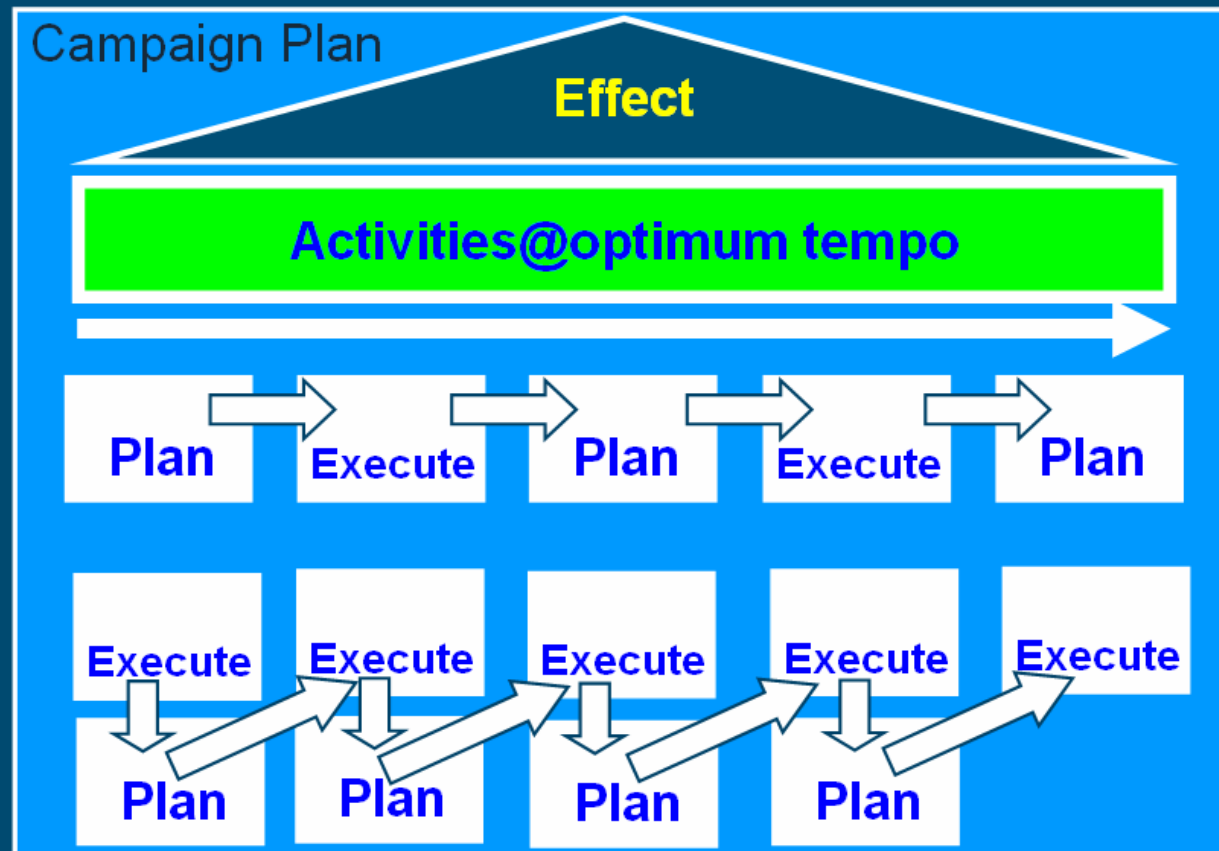

Conceptual Model

Current Planning & Execution

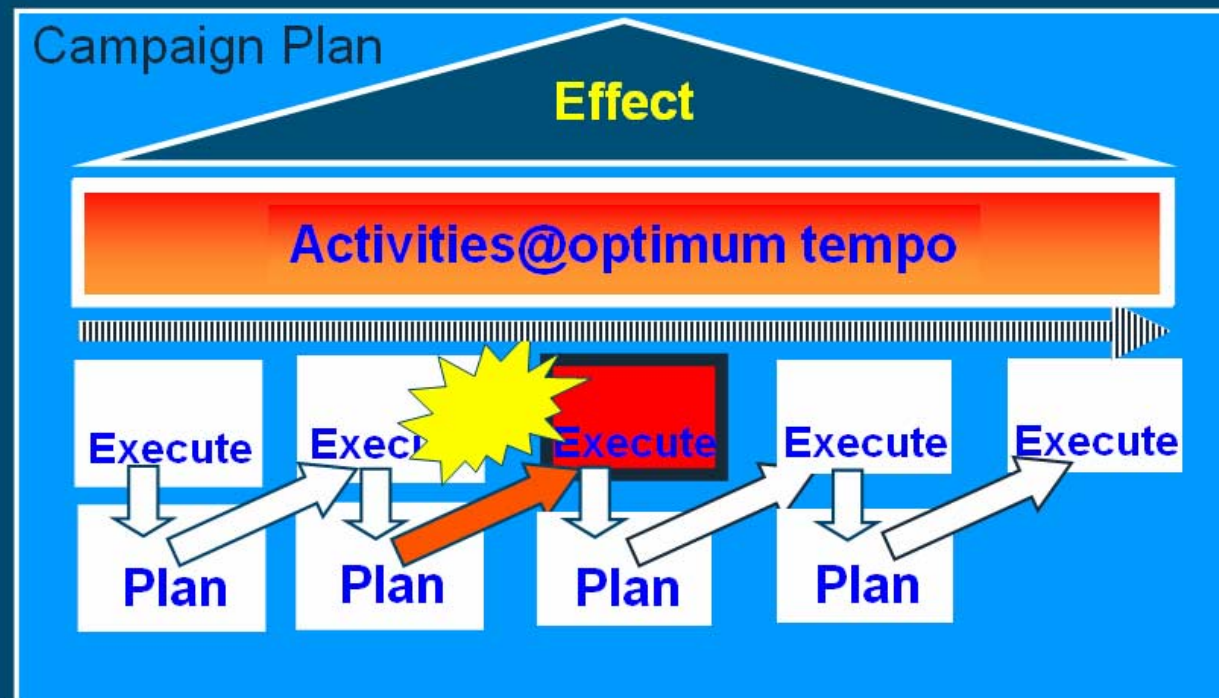

Continuous Activity @ Optimum Tempo

Change in the Situation

Continuous Activity @ Optimum Tempo?

Impact of a change in the situation

- **Already alter execution – technology?**
- **Information exchange: J5/J35/J3**
- **Replanning takes time - speed**
- **Maximum use of ‘old’ plan**
- **How can technology support the human to plan quicker and better following change?**

Example Application Domains

- **Identify potential areas for collaboration**
- **Common interest**
 - **Effects Based Operations**
 - **Logistics for Agile Forces**
 - **Wide Area Time Sensitive Airspace Coordination**
- **WATSAC & DP&E**

Wide Area Time Sensitive Airspace Coordination (WATSAC)

- **Airspace Management/Coordination**
- **Resolution of conflicts**
 - Deconfliction of airspace during initial planning
 - Centralised, inefficient process
- **Improvements in technology**
 - Near real time plan representation & coordination
 - Dynamic airspace deconfliction
 - Cooperative airborne ISR missions

Issues & Challenges

Issues central to having a DP&E capability:

- **Subjectivity**
- **Static Representation**
 - **Timeliness**
 - **Residual value**
- **Coordination**

Issues & Challenges (2)

- **Plan Representation Languages**
 - Capture context, assumptions & decision rationale
 - Link components & levels of comd
 - Facilitation of human/machine exchanges
- **Multi Agent Coordination**
 - Architectures & lack of unified framework
 - Constrained environments
 - Uncertain/open environments

Conclusions

- **DP&E is not well understood**
- **Desirable military capability**
- **Richer plan representation**
- **Application of coordination mechanisms**
- **How can technology better enable us to execute plans in a dynamic environment?**

Questions
